Just Another Marp Demo

Marp is very simple to write!

What is Marp

- A framework to write slides in Markdown

- Check [Marp documentation](#)

- There are alternatives to Marp. For example [Slidev](#)

- Advantages of Marp:
    - has VSCode extension `*`
    - very simple

- Disadvantages:
    - no support for some advanced features, like animations

" `*`: TBH Slidev has VSCode extension as well. " 2

Multiple H1 headers, HTML tags

- Using multiple H1 headers and HTML tags requires Markdown linter adjustment
- Here is an example of linter settings as code block with highlighting:

```json
{
    "markdownlint.config": {
        "default": true,
        // allow multiple H1s for Marp
        "MD025": false,
        "MD033": {
            "allowed_elements": [
                "div",
                "span",
                "style",
                "br"
            ]
        }
    },
    "markdown.marp.enableHtml": true
}
```
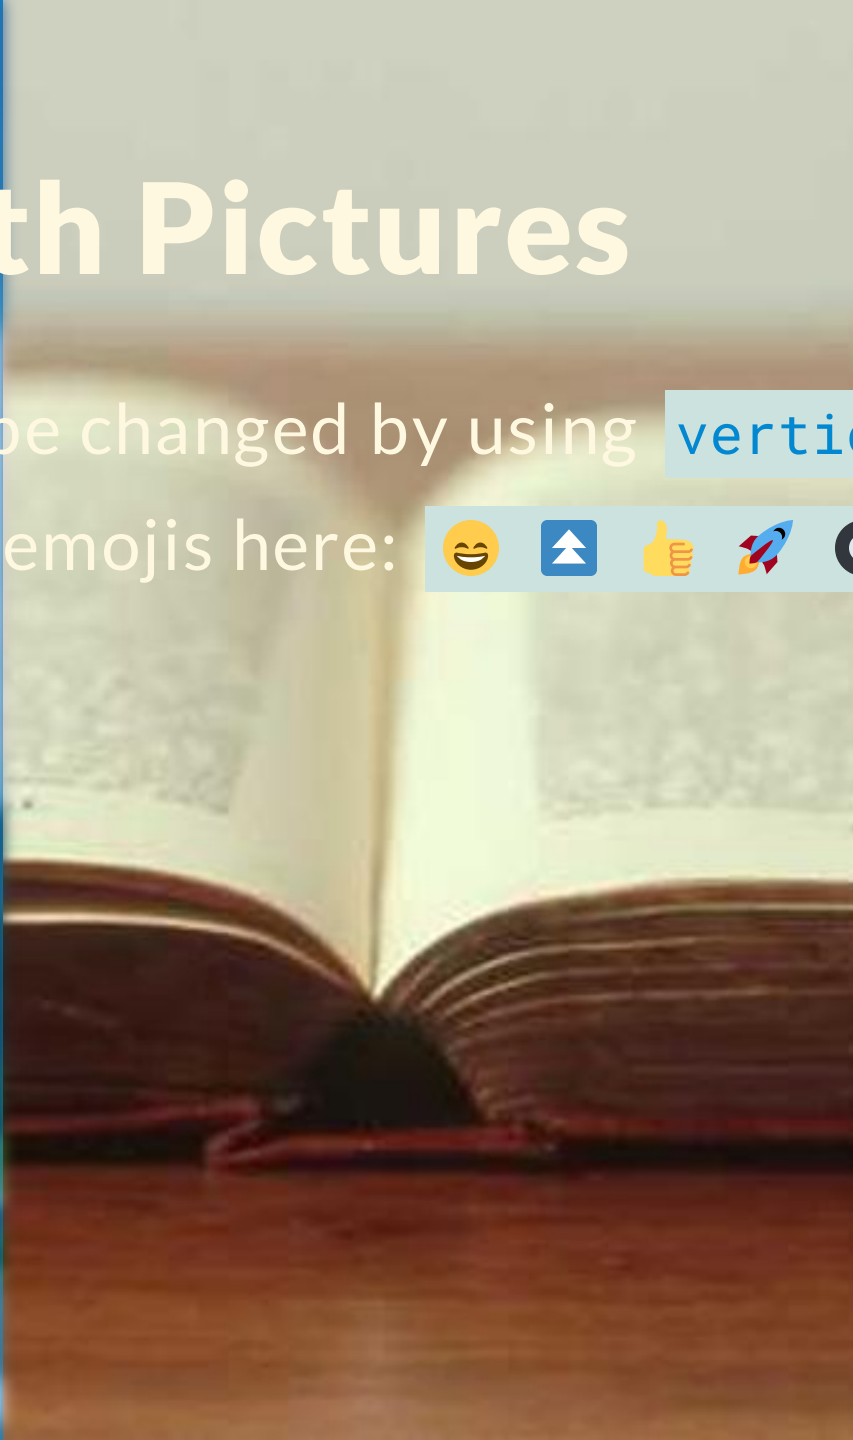

- `enableHtml` required to enable all HTML elements in Marp

Spot Directives

- It is possible to change the background colour and text colour for a single slide

- Or adjust style for any other element if necessary

Working with Pictures

- The alignment can be changed by using `vertical` keyword

- And let's add some emojis here: 😄 🔼 👍 🚀 🎱

Just a Table

Table	Layout	Example
← left	centred	right →
